- Manages effective dates for black keys.
- Destroys expired keys.

WHAT IS UKM?

Ultra's Key Manager (UKM) is a key management tool that allows the operator to load keys to an End Cryptographic Unit (ECU) remotely via an RCMS outstation over a secure Ethernet Local Area Network (LAN) connection. The software is a Microsoft® Windows® 7 compliant application. The intuitive user interface assigns keys using a drag-and-drop method. The operator can print a COMSEC SF-153 Report for destruction and is an alternative to the DMD (GOTS) software solution.
